

## 6.2 What is a low mass emissions (LME) unit ?

Low mass emission units are defined in Table 13.

**Table 13. Low Mass Emissions Units**

A combustion unit may qualify as a low mass emissions, or “LME” unit if it meets the definition of a gas-fired or oil-fired unit in §72.2, and if its SO <sub>2</sub> and/or NO <sub>x</sub> mass emissions meet the following limits: . . . .	
<i>For Acid Rain and CAIR SO<sub>2</sub> Program units:</i> <ul style="list-style-type: none"><li>• ≤ 25 tons of SO<sub>2</sub> per year</li><li><u>and</u></li><li>• &lt; 100 tons of NO<sub>x</sub> per year</li></ul>	<i>For CAIR NO<sub>x</sub> Program units:</i> <ul style="list-style-type: none"><li>• ≤ 50 tons of NO<sub>x</sub> per ozone season<sup>a</sup></li><li><u>and</u></li><li>• &lt; 100 tons of NO<sub>x</sub> per year<sup>b</sup></li></ul>

<sup>a</sup> This limit does not apply to CAIR NO<sub>x</sub> units in GA, TX, and MN.

<sup>b</sup> This limit does not apply to non-EGUs in CAIR, or to CAIR NO<sub>x</sub> units in MA, CT, and AR.
