

9.4.3 Appendix G

For an Acid Rain Program unit that uses Equation G-1 in Section 2.1 of Appendix G to calculate daily CO₂ mass emissions, missing data substitution for carbon content is required whenever fuel sampling results are missing or invalid. For periods of missing carbon content data, you may report either the appropriate default value from Table G-1 in Appendix G or the results of the most recent valid sample.

For a unit that uses Equation G-4 in Section 2.3 of Appendix G to calculate hourly CO₂ mass emissions, when fuel flow rate and/or GCV data are missing, follow the procedures in Appendix D of Part 75 to provide the appropriate substitute data values.
