Trend Configuration

The *Trend Configuration Tool* in the *Admin Tab* allows the user to add, edit or configure trends. The tool also allows the end-user to create new trends or determine which units or parameters are to be shown on the *Trends Tab*, as seen in the right-hand side, upper right of **FIGURE ERROR! No text of specified style in document.**-1. A *Trend* group may be multi-scaled (each pen is rescaled 0-100% for visibility), made public, activated, given a default amount of data to display, and assigned a Reporting Group, as seen in the right-hand side, upper left of **FIGURE ERROR! No text of specified style in document.**-1 If an item is not listed in the *Tags*, the administrator may create a new *Tag*, then, return to *Trends Configuration* for monitoring, (see ERROR! REFERENCE SOURCE NOT FOUND. for more information on configuring tags).
