Data Collector Service Sub-Tab

The *Data Collector Service Sub-Tab* presents statuses for the disparate *Sources* in the system, as seen in FIGURE ERROR! **No text of specified style in document.**-1. If configured, each *Source* has its own event log, displayed in a grid. Selecting the *Source* on the right will list the event log for that *Source*. The end-user may filter the event log contents based on entries made in the *Log Time*, *Severity*, and *Message* filter fields, located just under the headings in the grid.
