10.3.2 *Field Audit Targeting Tool*

   EPA has developed an electronic auditing software tool, known as the Targeting Tool for Field Audits (TTFA). This tool is intended to be used primarily to target sources for field audits. The TTFA tool is capable of identifying a variety of CEMS operation and maintenance problems, such as gas monitoring systems with possible probe leaks, monitors with an excessive number of failed calibration error tests or linearity checks, sources with long periods of monitor down time, monitoring systems with improperly-set span and range values, etc.
